

Python Page Builder

Run the python script titled 'pageBuilder.py' or any of the compiled .exe file

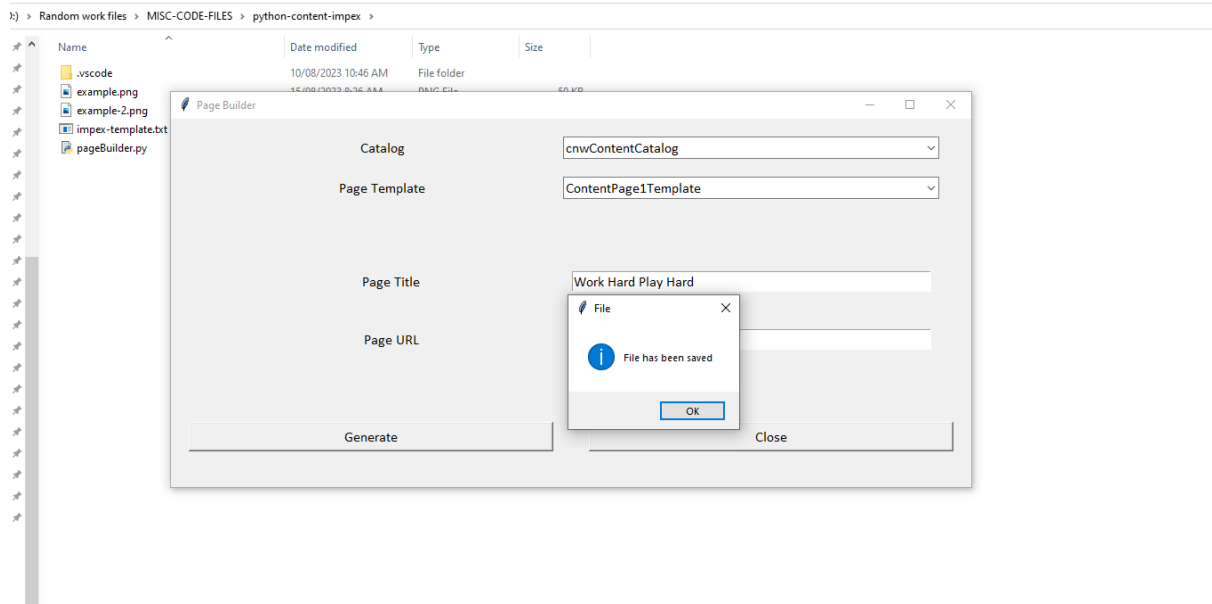

Catalog	Select drop-down list which contains content catalogs
Page Template	Select drop-down list for WCMS page template
Page Title	User should enter page title
Page URL	User should enter the url alias for page title

Once the 'Generate' button is clicked, a File Save dialog window will be opened and give the user the option to save/create an Impex file in the desired location.

Once the Impex file is generated, a dialog will appear to state that the file has been saved.

Example of the output file

```
#=====
=====
#===== STAGED
